Model \_\_\_\_\_ Installer \_\_\_\_\_

Congratulations on the purchase of your Marathon Water Heater. This water heater will provide you a lifetime of energy savings if you follow just a few simple steps:

- Do not apply heat to the top union nuts.** Build a short assembly with male and female adapters, and solder separate from heater. After they cool, screw them onto the tee, and brass nipple.
- Do not over-tighten the union nuts.** There is a flat neoprene washer on the inside of these unions and “snugging” with water pump pliers is sufficient for a good seal.
- Install a drain line on the temperature/pressure relief valve.** Drain line should be plumbed to within 6” of the floor.
- Fill the tank with water before turning on power.** Vent air out of a faucet to make sure no air pockets remain before energizing.
- Be sure to fill out and mail the warranty registration card located in your owner’s packet.**
- If you have questions, please refer to the Quick Start Guide, Owner’s Use & Care Manual, or call your utility for guidance.** More product information may also be found at [www.marathonheaters.com](http://www.marathonheaters.com)

I have reviewed the above information with the purchaser/installer

\_\_\_\_\_ (Utility)

The information on how to correctly install a Marathon water heater has been reviewed with me and I understand that failure to follow these steps may void the warranty.
